ABSTRACT

Developed for students at the University of North Texas, this directory lists 482 libraries with computerized catalogs that can be accessed through the Internet. Most of the libraries are academic libraries, the majority of which are located in the United States. The list also includes libraries located in Europe, Australia, Israel, and elsewhere. Each entry provides information about how to connect with and search the online catalogs. More detailed information on using various library software systems, such as NOTIS, OCLC, or PALS is provided in 22 appendices. A table of contents and an index are provided. (Contains 14 references.) (KRN)

UNT's Accessing On-Line Bibliographic Databases

By Billy Barron, billy@unt.edu

(C) 1989-1992 University of North Texas

Permission is granted to any individual or institution to use, copy, or distribute this document freely as long as it is not sold for profit. Excerpts from this document may be used in other documents provided they are not sold for a profit.

This document can be acquired via anonymous FTP on the node FTP.UNT.EDU (129.120.1.1). Additions, corrections, and deletions should be sent to billy@unt.edu. All additions should contain signon instructions, signoff instructions, type of library software, and a contact (no new entries without a contact will be added).

This document is mainly designed for a VT100 environment. Many of the library systems allow other terminal types. At the point when VT100 is selected, you can choose other terminal types. Most IBM mainframes can only connect to TN3270 sites.

This document was edited in WordPerfect 5.1. Margins are 1" on all four sides. The ASCII version is done in 15 point Times Roman. The Postscript version is in 11 point Times Roman. The document is setup for 8.5" x 11" (21.59 x 27.94cm) paper.

Introduction

Over the last several years, most university libraries have switched from a manual (card) cataloging system to a computerized cataloging system. The computerized cataloging systems provide users with easy to access and up-to-date information about the books available in the library. This ease of access has been accomplished with the advent of local area networks, dialup modems, and wide area networks. for example, anybody on the University of North Texas campus who has access to the Sytek Local Area Network or the campus-wide Ethernet can access the UNT's library computer system. Also, UNT has dialup modems. Through these modems anybody with a computer, a modem, and a telecommunication package, such as PROCOMM, can access the library computer from home. The wide area networks allow users free access to other universities' library systems around the world.

Accessing these library systems are described in this document. Details of using various library systems are described in appendices. Also, another appendix has information on how to connect to the Internet from JANET. Yet another appendix gives a list of TELNET and TN3270 escape key sequences for various communications packages. Finally, the last appendix gives references to other useful documents and programs.

Sites that have access via SET HOST are only available to THENET nodes.

You can combine words or phrases using symbols for the boolean operators "and" (symbols "&", "/") "or" (symbol "|"), and "not" (symbol "~"), for example,

```
find united nations & peace
f united nations / war
```

Note: This appendix written by Mr. Mitchell of Brandon University.

Appendix D: Using CATS

Describing CATS presents an interesting problem. Every CATS system has its own site specific menuing system that is different than every other CATS system. In addtion, all of them are extremely easy to use. for these reasons, no instructions are provided in this guide.

Appendix E: Using Dynix

The Dynix library package is an entirely different product from the Dynix Operating System that is used on Sequent Computer.

Title searches: If the exact title is known, select the "Title Alphabetical list" option on the menu. If the exact title is not known, select the "Title Words" option.

Author searches: Choose the appropriate number from the main menu.

Subject searches: Choose the appropriate number from the main menu.

Keyword searches: Choose the appropriate number from the main menu. Some systems will look for terms in the subject field, some in the title field, as indicated on the menu.

Call number search: Choose the appropriate number from the main menu.

Appendix F: Using GEAC

Title searches:	To search for a particular title, use the TIL search command followed by the title.
	Example: **TIL Tao of Programming**
Author searches:	To search for a particular autho, use the AUT search command followed by the name of the author.
	Example: **AUT Clancy**
Subject searches:	To search for a particular subject, use the SUB search command followed by the subject.
	Example: **SUB Sidewalks**
Keyword searches:	To search for a particular keyword, use the KEY search command followed by a string.
	Example: **KEY Alligators**
Call number search:	To search for a paricular keyword, use the NUM search command followed by a call number.
	Example: **NUM lb110b64**
Help:	To see help, type **HELP**.
Previous Screen:	To see previously displayed screens, type **BAC**.
Next Screen:	The next screen is usually displayed by typing **FOR**.
Picking an item:	On screens where a list of items appears, a particular item can be selected by typing the number to the right of item.

Appendix G: Using Inlex

Use the following instructions to search:

Title search	ti=
Author search	au=
Subject search	su=
Call Number search	ca=

To display titles, type dt=[line number].

```
HELP

For specific HELP, enter HE=  and the desired command: HE=AU means Author help.
                                -----
     INSTRUCTIONAL COMMANDS, which can be used at any time, are:
HElp..........HE    Bulletin Brd...BB    EXit...........EX    INstructions...IN
                                -----
     SEARCH COMMANDS, used to initiate a specific search, are:
AUthor........AU    SUbject........SU    TItle..........TI    CAll # search..CA
                                -----
     DISPLAY COMMANDS, used following a SEARCH command, are:
Disp Titles...DT    Disp Call #....DC    Next Page......NP    Prev Page......PP
Step Back.....SB    Disp Full Rec..DF    First Page.....FP    Last Page......LP
                                -----
                  for further HELP, enter HE=HE
                                -----
```

```
HELP HELP

HELP: You can enter HE or HE=__ (specific command) at any time for assistance.

DISPLAYS: Upper  - displays the information you requested in your last command
          Middle - displays the most useful commands for your next step
          Lower  - displays search history and prompts you to enter a command
                                 ---
CURSOR ARROW:  > points to the index entry which satisfies or most nearly
  matches the search request.  This is usually positioned in the middle of the
  listing to allow browsing adjacent entries.  When a line number other than
  the one indicated is chosen for display, the arrow relocates.

INVALID COMMAND:  if a command entered is invalid or inappropriate at that
  place in a search, the system prompts again for the entry of a command.
                                 ---
TO PROCEED: enter RD to ReDisplay your previous place in Inlex.
```

Appendix H: Using INNOPAC

This software is also known as Innovative Interfaces. INNOPAC is easy to use. Just press the letter or number next to the item that you want. There is no need to press the ENTER or RETURN key when choosing one of the menu options.

Title searches:	To search for a particular title, select **T** on the main menu.
Author searches:	To search for a particular author, select **A** on the main menu.
Subject searches:	To search for a particular subject, select **S** on the main menu.
Keyword searches:	To search for a particular keyword, select **k** or **w** on the menu.

All the other commands vary from system to system.

Appendix I: Using Libertas

Describing Libertas presents an interesting problem. Every Libertas system has its own site specific menuing system that is different than every other Libertas system. In addtion, all of them are extremely easy to use. for these reasons, no instructions are provided in this guide.

Appendix J: Using LS/2000

The LS/2000 system offers two searching styles:

Keyword	Use this style when you are unsure of the exact term, author, name, or title that you wish to search. Enter a word or phrase and press RETURN.
Heading	Use this style when you are sure of how the library describes the author, title, or subject that you are searching. Enter the number of the search you want to use, and when prompted, enter as much of the BEGINNING of the heading as you are sure of.

HOW TO ENTER SEARCH TERMS

For a specific TOPIC

you are unsure of library terminology, enter a keyword you know.

you are certain of the library's subject heading: when prompted, enter the first word(s) of subject heading.

For an Author: when prompted, enter the author's name Last, First

For an Organization or Government Agency or Conference:
When prompted, enter the first word or words of the organization or conference name.

For a title: when prompted enter the first word or words of the title.

SEARCHING HINTS

Press RETURN after each entry. This lets LS/2000 know that you are ready for it to begin work.

Less is better than more. The system will always show you all entries that begin with what you enter. so if you enter "book" you will see any entries that begin with "Book" or "Books".

The "^" key will take you one step backwards in your search.

When a list ends with "more", you may:

Press RETURN to see the next part of the list.
Enter /B to see the previous list.

Appendix K: Using MultiLIS

MultiLIS is menu/prompt driven and is not difficult to use. Use the PF1 key to return to the previous menu/screen. Press the HELP key or KeyPad7 key for context-sensative help. Status and error messages are usually displayed in the lower right-hand corner of the screen. Press the RETURN key to acknowledge these messages.

Title searches: Type one or more words from the title.

MultiLIS will display an individual record (if only one record is found), or a list of titles.

Example: dead zone
pet sematar*
christine;

Author searches: Always type the author's last name first.

MultiLIS will display an individual record (if only one record is found) or an alphabetically arranged list of authors.

Example: king stephen
king, stephen
king s

Subject searches: Type one or more words which describe the subject.

Example: american horror tales
horror tales;

When searching by author, subject, organizations and conferences, series, uniform title, or publisher, MultiLIS will usually display a list of items which match your search. To see the TITLES listed, type the number or range of numbers. Note that once you have selected items from this display, you cannot return to this display without redoing the search.

Example: 1,5-8,12

To see the detailed RECORD for a title, type the number for the title you want.

Function Keys

Help:	Help or KeyPad 7
New search or Exit:	PF1
Previous screen or record:	PF2
Next screen or record:	PF3
Print record:	PF4
Limit by date or language:	PF5 or KeyPad 5
Display search history:	PF2 or KeyPad 2 (at searching screen)

Appendix L: Using NOTIS

Title searches: To search for a particular title, use the t= search command followed by the title.

Example: **t=foundation**

Author searches: To search for a particular author, use the a= search command followed by the author's name.

Example: **a=asimov**

Subject searches: To search for a particular subject, use the s= search command followed by the subject.

Example: **s=tennis**

Keyword searches: To search for a particular keyword, use the k= search command followed by a string.

Example: **k=cry wolf**

You may use the logical operator (AND, OR, NOT) and parenthesis to group the operators. Also, $ is a wildcard character for 4.6 with BRS search. 5.0 sites with NOTISearch use ? instead.

Examples: **k=car and fast**
k=computer and not ibm
k=comp$ and (toy or game)

Call number search: Only available in version 5.0. Use the c= search command.

Example: **c=rc493g543**

Help: On most screens, help can be seen by the h command.

Picking an item: On screens where a list of items appears, a particular item can be selected by typing the number to the right of item.

Appendix M: Using OCLC

There are five different types of searches available:

Keyword (in subject headings and/or title),	[Press **K** then **RETURN**]
Author/Title (either one or both),	[Press **A** then **RETURN**]
Classmark,	[Press **C** then **RETURN**]
LBN (Library Book Number),	[Press **L** then **RETURN**]
ISBN	[Press **I** then **RETURN**]

To leave this system at any stage, press the menu key (**ESCAPE**) and type **Q** followed by the **RETURN** key or its equivalent. If this is the first time you have used this system, please press the menu key and type **H** followed by **RETURN** for further information.

Appendix N: Using PALS

Many PALS systems are networked together with other PALS systems. The other systems may be searched using the **SET HOST** command (not to be confused with the VMS command of the same name). To get a list of the networked hosts available for searching, enter the command **SHO HOSTS**. By entering the command **SET HOST HHH** (where HHH is a remote host name), you will enter the remote system and set your search default to a specific institution or group symbol. This is done by using the command **SET XLIB** command. To get a list of institutions or symbols on a remote host, enter the command **SHO HOST HHH** (where HHH is the remote host name). Once in the remote host, searching is performed just as if you were in your own system.

Commands:	SHO HOSTS	get a list of remote hosts
	SET HOST hhh	begin searching in a remote host
	SHO XLIBS	get a list of all external libraries
	SHO HOST hhh	get list of libraries on host hhh
	SET XLIB xxx	begin searching remote library xxx
	SET HOST LOCAL	reset search to local host

Title search: Use the TI command followed by up to four title words.

Example: **TI Foundation and Earth**

Author search: Use the AU command followed by Last, First, and Middle name(s) with no punctuation.

Example: **AU Donaldson Stephen**

Combination search: Use the CO command followed by Author Lastname and Title Firstword.

Example: **CO Cook Black**

Subject search: Use the SU command followed by 4 word heading.

Example: **SU New Guinea**

Call number search: Use the CA command followed by the call number.

Example: **CA QA76.8.I294 1988**

Type **HELP** for help.

Appendix O: Using Unicorn

Unicorn uses some strange control keys to perform most of its functions.

Function	**Key**
Find	CTRL-F
Search	CTRL-G
Send	RETURN
Next Field	TAB
Help	CTRL-Z
Display	CTRL-A
Cut	CTRL-O
Paste	CTRL-P
Insert	CTRL-R
Delete	CTRL-T
Back 1 Screen	CTRL-E
Forward 1 Screen	CTRL-W
Cursor Left	CTRL-H
Cursor Right	CTRL-L
Cursor Up	CTRL-K
Cursor Down	CTRL-J

Appendix P: Using URICA

URICA is a menu-driven system and fairly easy to use. However there are a couple of things to note about the interface. First, to get help, hit the \ key. To exit from a menu and back up to the last menu, you use the . key.

Appendix Q: Using UTCAT

You should be at the UT Library Online Catalog -- Search Choices Menu. From this menu, you may type 1 or 2 letter search commands and the word(s) you want to search for. After your search command is typed in, hit the keypad ENTER key.

AUTHOR searches: To search for a particular author, you use the A (Author) search command followed by the author's name.

Example: **a mowat, farley**

To see the index of authors, you use the AI (Author Index) search command followed by the first author you wish to see.

Example: **ai mowat, farley**

TITLE searches: To search for a particular title, you use the T (Title) search command followed by the title of the book.

Example: **t never cry wolf**

To see the index of titles, you can use the TI (Title Index) search command followed by the first title you wish to see.

Example: **ti never cry wolf**

To search for certain keywords in a title, you can use the TK (Title Keyword) search command.

Example: **tk wolf cry**

SUBJECT searches: To search by subject, you can use the S (Subject) search command.

Example: **s wolves**

Also, from the Search Choices Menu, you can type 3 letter commands followed by Keypad Enter or their equivalent PF keys.

BACk (PF1)	To page back and review up to 10 screens of results.
REPeat (PF2)	To repeat the last search typed in.
INDex (PF3)	To move from brief or full records to the corresponding index.
EXPlain (PF4)	To view general information about the Online Catalog.
NEWs (PF5)	To view current information about Online Catalog developments.
HELp (PF6)	To see context sensitive help.
MENu (PF7)	To move back to the Search Choices Menu.
STOp (PF8)	To exit from the Online Catalog.
COMment	Send comments to library staff.

Finally, if a list of items is on the screen, you can type the number of the item you wish to see.

Please note that some terminal packages remap the keypad ENTER key to other keys. For example, in Procomm the equivalent to Keypad ENTER is Shift-F10. Keypad ENTER is equivalent to ESC O M.

Appendix R: Using VTLS

Advanced User Search System:

Author searches: To search for a particular author, use the A/ search command followed by the author's name.

Example: **A/Hemingway, Ernest**

Title searches: To search for a particular title, use the T/ search command followed by the title. Omit any leading articles such as THE, A, AN, LA, ...

Example: **T/Sun also rises**

Subject searches: To search for a particular subject, use the S/ search command followed by the subject.

Example: **S/Metals**

Keyword searches: To search for a keyword, use the W/ search command followed by the subject.

Example: **W/Computers**

Boolean Keyword: To search for keywords with boolean operators, use the B/ search command followed by a keyword, then an operator, and then the second keyword.

Example: **B/Ocean and Island**
B/Dog or Cat

Help: To see help, type **/HELP**.

Previous Screen: To see previously displayed screens, type **PS**.

Next Screen: The next screen is usually displayed by typing **NS**.

Novice User Search System

The Novice User Search System can be accessed at any time by typing ?. This novice mode is an easy to use menu driven method of searching. In addition, the novice mode also offers training on using the Advanced User Search System. Advanced User Search System commands may be typed in at any novice level prompt.

Appendix S: Using Z39.58

Z39.58 is a standard from NISO known as the Common Command Language standard. I have just received the latest draft of the standard and will add to this section in the near future. Basic searches are in the form:

FIND <index name> <search terms>

The following are common index names:

au	author search
ti	title search
to	topic search (Dartmouth only)
su	subject search (Harvard only)

Examples:

FIND AU Twain
FIND TI Dune
FIND SU Space

The DISPLAY command will display the results.

Type **HELP** for help.

ppendix T: Accessing from JANET

Connect to uk.ac.nsfnet-relay (uk.ac.nsf.tn or 00004001018057). I think that the command **PAD UK.AC.NSFNET-RELAY.TELNET**. Once connected you will be prompted for the address of a host. Enter the Internet address (either name or numeric) at this point. If you need tn3270 access, when it asks you where you would like to telnet to say **TN3270** and then specify your terminal type when prompted (probably vt100).

Appendix U: TELNET/TN3270 Escape Keys

System	Package	Escape Key(s)
MS-DOS	CUTCP	ALT-X
	KA9Q	F10
	MD-DOSIP	ALT-<space>
	NCSA TELNET	ALT-X
	PCIP	F10 Q Y
	PC/TCP	F10 c
	PC-NFS	F10
Macintosh	NCSA	Apple-K
VAX/VMS	CMU	CTRL-^ c
	Multinet TELNET	CTRL-^ q
	Multinet TN3270	CTRL-C q
	UCX	CTRL-]
	WIN/TCP TELNET	CTRL-] q
	WIN/TCP TN3270 (5.0/5.1)	CTRL-Y
	WIN/TCP TN3270 (5.2)	CTRL-Z q
Unix[1]	TELNET	CTRL-] q
	TN3270	CTRL-C q

Notes:

1. These keys should work on all BSD based systems such as the Solbourne. The System V Unix keys are unknown.
